

Advisory Note 3
Blueway Signage Guidelines

Prepared by Outdoor Recreation NI on behalf of the Blueway Partnership

Blueway Signage Guidelines

Principles Relating to Signs

- A balance must be made between providing sufficient minimal signage to encourage and give practical support to the user while not undermining the aesthetic value of the trail through sign clutter and the urbanising of the unspoilt or wilderness experience.
- Signage should where possible animate the Blueway and encourage the participant to do more.
- Signage should confer quality and be consistent.
- Positive signs indicating what is possible should where practical be used in preference to signs which indicate limitations.

Brand Guidelines will be issued to Blueway Developers once their Blueway is fully accredited.

Irish Language

The Official Languages Act (Republic of Ireland only) sets out the statutory requirements regarding the use of the Irish language by public bodies. Most Blueways will be developed or funded by public bodies and hence it is likely that these requirements will apply. The following is an excerpt of some of these requirements:

- Place names on information signs must be in both Irish and English except:
- In Gaeltacht areas, where the names of places should be in Irish only.
- Where the spelling of a place name is similar in both languages, in which case only the Irish form of the name should be shown
- All Irish text should be in italic print, in lower case lettering, with initial letters in capitals.
- Irish script should be inclined to the right at an angle of 15 degrees to the vertical. All English text should be in upper case roman letters

Note that the content of Blueway information panels must be presented in Irish and English, including Gaeltacht areas. To identify the correct spelling of a place-name in Irish, consult www.logainm.ie

The use of icons instead of text on signs reduces the difficulty in comprehending sign content for non-native speakers of Irish and English.

Directional Signs to the Blueway

- Directions to the main entry trailheads along the Blueway should be signed. Signing should commence at the nearest town, village or junction with the nearest national road. Thereafter all junctions from the first sign en-route to the trailhead must be signed.
- Minor trailheads may be signed similarly to the main trailheads if required. The main trailheads should be easy to find however it may not be appropriate to provide directional signs from centres of local population and national roads to all of the trailheads due to sign costs as well as the risk of confusion where there are signs to multiple Blueway entry points in the same area.
- Signs which are used on Public Roads in the Republic of Ireland should follow the guidelines within DTTAS Traffic Signs Manual – See Section 4.22 ‘Tourist Attractions and Facilities’ 2010
<http://www.dttas.ie/roads/publications/english/traffic-signs-manual-2010>

- Signs which are used on Public Roads in Northern Ireland should follow the guidelines within Transport NI 'The Signing of Tourism Attractions and Facilities' 2014
<https://www.infrastructure-ni.gov.uk/sites/default/files/publications/drd/the-signing-of-tourist-attractions-and-facilities-rsppg-e029.pdf>

Blueway Trailhead Signage

Trailhead Entrance / Identifier Sign

In many cases, a trailhead entrance or identifier sign may be required to identify the trailhead / access points. The requirement for a trail head information panel to be in close proximity to the water often means they can be hidden within busy car parks.

This trailhead entrance or identifier sign will therefore provide reassurance the visitor is in the right place. It should:

- be clearly visible to passing traffic
- not block visibility to those entering or exiting the site / car park
- never be used in place of a white on brown road sign / directional sign

Trailhead Information Panels

Trailhead information panels should be:

- clearly visible from the car park
- positioned so as not to impact visitor flow i.e. visitors reading the panel should not disturb the flow of vehicles or people throughout the site

If a trailhead combines water and land-based trails it is good practice to separate the information relating to the individual activities e.g. one panel for a paddling trail and one panel for a walking trail. An overview panel may be useful to provide insight into the spatial relationship of the component trails.

It is recommended that trailhead panels have a secure updateable section to update visitors on frequently changing aspects for example events, trail closures etc.

Water Based Trails - Trailhead Information Panels

For the majority of newly developed Blueways, the water-based trail will be the new element. Trailhead information panels should be placed close to the water. If the access point is not obvious from the location of the trailhead information panel then additional directional signage may be required. Trailhead signage for water-based trails should include:

Trail Description detailing:

- Named Access & Egress Point
- Distance Km
- Duration
- Difficulty
- Short Description

Map – a large simple trail map

- A clear legend of symbols
- A scale plus kilometre marker
- A north pointer
- The complete trail section¹
- 'You are Here' pointer
- Start and Finish Locations
- All defined access & egress points
- Location of obstructions, hazards or increase in difficulty

Other

- Key contacts and emergency information
- Method for visitor feedback – website / email / phone number
- Responsibility Statement
- Invasive Species Messaging – See Appendix 9

Maps must be oriented to suit the map board location for trails next to open water (note this might not be North up)

Water Based Trails – On trail signage

Signage along water-based trails should be kept to a minimum so as not to ruin the natural aesthetic. However, the following signs may be required:

- Colour coded indicator markers – indicating the safe or navigable heights of water levels at access points on river Blueways. These indicators may make use of existing structures such as bridges or slipway walls
- Flags or Wind Socks – are useful to indicate wind strength/direction and also identify access/egress points from the water
- Confirmatory signs -are only to be used where essential, for example where there are multiple indistinct choices some of which have the potential to significantly undermine the Blueway experience – for example routes around river islands

Water Based Trails – Portages

Portages should be provided on inland trails where either the route on the Blueway is impassable for example the presence of a dam or if the route is beyond the ability of the target Blueway user, for example the presence of a weir or rapid on a placid water trail.

- The portage egress should be clearly identifiable from the waterway, either due to the visibility of infrastructure or if necessary appropriate signage. Where the egress for the portage is reasonably visible from the water, a small courtesy egress sign might be located at this site so as to provide reassurance to the Blueway user.
- The portage route should be safe, as short as possible, clearly identifiable, have a suitable surface and an appropriate egress and access point to the water. Portage is not preferable on Blueways.

Land Based Trails

¹ For paddling trails this should be a line however Blueway sites incorporating may indicate areas for snorkelling or kayaking

Where Blueways incorporate land-based trails i.e. waking and cycling trails that are already in existence then it is acceptable to utilise existing trailhead information panels, signage and waymarking as long as they meet the Sport Ireland – Management Standards for Recreational Trails.

However, the development of the Blueway may provide an opportunity to refresh the trailhead panels to follow the Blueway brand and therefore be consistent with the water-based trails.

All new signage and waymarking on land based trails should conform to the requirements of the Sport Ireland – Management Standards for Recreational Trails.
